Use the devices that work best for you

Choose from a wide range of smartphones, exclusive rugged phones and specialty devices

Simplify your team's workflows

Integrate EPTT into complimentary workforce management solution

Simplify management

Manage devices in the field or conduct PTT calls directly from a computer

AT&T Enhanced Push-to-Talk from KG Communications

Collaborate with anyone, virtually anywhere— one-to-one or one-to-many, with just one tap

Connect with the team members you need, the moment you need them. With KG Comm's AT&T Enhanced Push-to-Talk, you can see who's available and talk one-to-one or one-to-many. No call waiting. No phonetag. No voicemails. Just the active, near real-time information you and your teams need to stay on track and keep moving. Sub-second team connection is powered by the nation's strongest 4G LTE signal¹ and most reliable 4G LTE network² with the additional support of Wi-Fi, ensuring quick, dependable, and widespread coverage. That means teams can collaborate and work across meters or miles with a simple touch of a button.

All-in-one productivity, built on what you already have

An all-in-one solution means everything your team needs is finally in one place. With AT&T Enhanced Push-to-Talk, your team can use the devices and platforms they're already familiar with and turn them into productivity powerhouses. Team members can choose from a wide range of smartphones, rugged phones, and specialty devices and accessories across all major mobile platforms, allowing each team member to work the way that works best for them.

And because AT&T Enhanced Push-to-Talk integrates into smartphones, your teams can combine multiple devices and functions into a powerful all-in-one communication tool that switches between applications easily. That means more time is spent getting work done and not juggling equipment.

Make your workforce more effective

AT&T Enhanced Push-to-Talk is also built on an open API platform so it not only helps teams talk to each other, but it can intuitively interface with your other productivity applications, enabling seamless integration into industry applications you're already using, including dispatch, fleet management, GPS tracking, ticketing, field force automation, work order management, mobile forms, and mobile resource management.

We can also get AT&T Enhanced Push-to-Talk up and running fast, providing the know-how to integrate Push-to-Talk with the systems you already own, such as Wi-Fi, rapid response, or mobile radio (private/land), so you can pick up right where you left off, but with better capabilities than before.

Reach out to KG Communications to learn more. 855-875-9848 or info@kgcomm.net

1. Claim based ONLY on average LTE signal strength for national carriers

2. Based on nationwide carriers' 4G LTE. LTE is a trademark of ETSI. 4G LTE not available everywhere.

AT&T Enhanced Push-to-Talk is available to Customers in the AT&T Partner Exchange with a qualified AT&T Partner Exchange business agreement. It may not be available for purchase in all areas, and not all service features and functionality are available on all supported devices. Use of AT&T Enhanced Push-to-Talk requires eligible AT&T voice and data services, and acceptance of the End User License Agreement. Additional hardware, software, subscription, and/or special network connections may be required. Availability, security, speed, timeliness, accuracy and reliability of service are not guaranteed by AT&T. Go to <http://att.com/eptt> for more details.

Management made smart, simple, and easy with Integrated Dispatch

If you're a supervisor, you can now direct the action on the ground, from your desktop or laptop computer. Watch and guide your team with Integrated Dispatch, designed to let administrators locate and directly communicate to individual members or whole teams. You can remotely create ad hoc groups, record calls, and keep track of messages and alerts all from your console. For time sensitive communication, you can even override the channel to deliver important messages with a simple click of a mouse.

You can also remotely monitor and manage the actual devices and applications your teams use in the field in real-time. Set parameters, create contact lists (with up to 1,000 team members per group), connect your teams, and delegate control so you can sync, adapt, and move with the action in the field as it happens.

AT&T's Enhanced Push-to-Talk takes the field's most effective communication system and brings it into the next generation. Now you and your teams can get the instant and simple near real-time communication you need all in the devices that you want. Upgrade your field force with AT&T Enhanced Push-to-Talk today to fast track your productivity, cut costs, and create true collaboration.
